

Bio-Mass Instructions

Thank you for partnering with VerdaSure for your testing needs! Below you will find detailed instructions on how to collect and ship your samples back to our facility for testing.

What you need to start:

1. A signed and dated test requisition that provides all the necessary information about you and your sample(s). This form can be found on our website or was shipped to you in a “test kit” you have ordered.

What can make your life easier:

Consistent naming for your fields/crops. Some examples of crop names could be “NW Oregon Cherry” or “3 Acre SE” ... **It is important to note**, you will want to name your crop clearly and consistently if you are testing over several weeks so that we can send you an accurate graphical report that can not only help you this year, but may help you plan for next year!

Remember, you will need to test for each crop and strain you grow separately!

| STEP | WHAT | HOW | WHY |
|------|--|---|--|
| 1 | Collect 30 grams sample/crop (5 Buds / Flowers or at minimum 6 grams is required) | Top 2 inches from 10-15 different plants (3 plants from each corner + 3 from middle of crop) | Sample tracking, trending, and managing variation across your crop Provides a more accurate representation of the crop as a whole |
| 2 | Place the collected samples in a sample bag - SEAL TIGHTLY | Put in the sample and squeeze out the air, zip the seal | Keeping the samplings safe, intact and secure in transit |
| 3 | Label your samples | Name, Email Address, Unique Crop ID | We will use your crop ID to link your specific crop samplings together We will communicate your results to you via email (don't forget to make results@verdasure.com a trusted sender!) |
| 4 | Fill your pre-addressed envelope | With a requisition form, your sample bag, and copy of your Grower License | Ensures that we know what we're testing, how to report it to you and that we have clear visibility to your sample's chain of custody. We want to make sure the reports are exactly the way you want them! |
| 5 | SHIP IT! | Choose your shipper, pay for shipping! | We let you choose your speed and shipper of choice! |

Important Information

It is important to note, if you are shipping hemp material to our lab you may be required to provide additional information as required by the USPS. It is not always required, but it would be best practice for you to do this before shipping in the event you are asked for the information at the time of mailing.

Recently the United States Post Office (“USPS”) issued an advisory on “Acceptance Criteria for Cannabidiol (CBD) Oil and Products Containing CBD.” Those criteria are as follows:

1. A signed self-certification statement, subject to the False Statements Act (18 U.S.C. § 1001). Statements must be signed by the mailer and must include the text “I certify that all information furnished in this letter and supporting documents are accurate, truthful, and complete. I understand that anyone who furnishes false or misleading information or omits information relating to this certification may be subject to criminal and/or civil penalties, including fines and imprisonment.”
2. The industrial hemp producer possesses a license issued by the Department of Agriculture, for the state where the Post Office/acceptance unit is located, which includes documentation identifying the producer by name and showing the mailer is authorized by the registered producer to market products manufactured by that producer.

If asked to provide proof of allowable receipt of samples by our lab, please provide the VerdaSure’s processor license number – **482894-HP**

3. The industrial hemp, or products produced from industrial hemp, contains a delta-9 THC concentration of not more than 0.3% on a dry weight basis.

VerdaSure’s laboratory operates Monday - Friday 9am to 5pm.

Upon sample receipt, we will submit your results via email within **48 business hours.**

Sample received after noon on Friday, will report out to you by Tuesday.

For any questions or concerns, please contact our office at 414-386-3795

Crop Monitoring Details

If you have purchased multiple hemp tests or kits, please only collect one sample set per crop per day. You can submit multiple collection dates at one time, however separate collection dates are required when formatting the graph data on your specific crop. Your next sample can be sent in one of the supplied envelopes at your next desired time-point and continue to send at that cadence for consistent measurements for all your remaining samples. Consistent sampling and testing times will provide the most accurate graph for you and your specific crop to predict how your crop is maturing regarding THC and CBD potency. You will need multiple kits if you plan to monitor multiple crops or types of hemp, as one kit is designed to monitor one specific crop strain. Our linking of current tests to historical test data is only as accurate as the information supplied. If you choose to not follow the instructions or the intentions of the harvest monitoring kit, VerdaSure will not be liable for inaccurate graph-linked results.
